Prepare

Up-front planning and preparation combined with skilled management is the key to limiting an organization's exposure in the event of a cyber incident.

Security Review & Assessment	Incident Planning & Preparation	Incident Response Readiness Testing & Planning	Security Certification & Compliance
Perform a 360-degree evaluation of the effectiveness of your current security program, both internal operations and third-party vendors.	Develop comprehensive incident response plans, including communication protocols, to ensure clients are prepared before an incident or breach takes place.	Determine if your security team is prepared for an attack -- from response team readiness and tabletop exercises to communication plans.	Attain certification to demonstrate that your security program meets or exceeds ISO 27001 international standards as well as state or industry requirements.

EXTEND
RESOURCES

Prevent

A holistic approach to people, process, and technology enables your team to reduce the risk of security incidents.

Risk Assessment, Treatment & Measurement
Identify risks in your operation through penetration and vulnerability testing, and maintain a scorecard to measure progress against goals.

Security Policies & Procedures Development
Enhance your security operations and prepare for certification with processes and protocols based on best practices.

Security Process Improvement
Assess response results, strengthen your defenses, and continuously improve your information security program to reduce the impact of an incident.

Employee Awareness and Training
Conduct in-depth education and assessments designed to improve knowledge, enhance accountability, reduce the risk of human errors, and assess training efficacy.

Technology Selection & Implementation
Deploy solutions that align with your security strategy to support objectives and account for the organization's culture, governance, technology, and structure.

Security Process Integration
Combine security elements and activities from across the organization to ensure complementary processes that work together in harmony.

RESOURCES

Respond

If a breach occurs, it requires a knowledgeable, experienced team to successfully navigate through the challenges.

Forensic Incident Review	Incident Response Communications	Case Management	Incident Response Legal Services
Investigate, Contain, Eradicate, and Recover: Identify the source of an incident, eliminate the threat, and monitor for recurring threats.	Orchestrate communications program that addresses concerns of all stakeholders – including customers, vendors, employees, etc.	Perform an organized, collaborative incident response and investigation that delivers useful information and helps mitigate risks.	Work with counsel to understand and navigate regulatory issues, notification requirements, and public relations best practices in the time-sensitive aftermath of a breach.

EXTEND OnTrack

Streamline ISO Compliance and Certification

Web-based and easy to use, EXTEND's OnTrack platform takes the guesswork out of achieving and maintaining ISO 27001 certification. Serving as the one-stop shop to manage the documents, records, and processes required for compliance, OnTrack guides users through the steps to create policies, procedures, and other documentation. This streamlined approach enables security teams to:

- Easily interpret compliance requirements and identify organizational gaps
- Develop an ISO 27001-compliant information security management system Identify opportunities for improvement in environment, processes, and protocols
- Update controls and other documentation to meet the standards
- Conduct risk assessments and treatment of the enterprise's assets
- Measure information security objectives
- Maintain training records, access control, and a scorecard to measure program effectiveness

CrowdStrike

Falcon Host: Built to stop breaches.

The CrowdStrike Falcon lightweight agent and powerful cloud work seamlessly to deliver real-time protection and visibility, even when the agent is not connected to the internet. CrowdStrike Falcon provides robust threat prevention, leveraging artificial intelligence (AI) and machine learning (ML) with advanced detection and response, and integrated threat intelligence — all through a highly intuitive management console.

• Falcon Prevent: Next Generation Antivirus
• Falcon Insight: Endpoint Detection and Response (EDR)
• Falcon Overwatch: 24x7 Monitoring & Threat Hunting

Forensic Services: Incident Response

CrowdStrike identifies and tracks attackers in near-real time, focuses on quickly mitigating their unauthorized access to your environment, and gets your organization back to normal business operations – faster.

Blackberry

Blackberry Work: Strengthen the security of mobile computing

Blackberry Work's Mobile Device Management (MDM) helps information technology (IT) administrators manage their mobile devices according to their organization's needs with total visibility, control, and flexibility across a variety of use cases and ownership models.

- Users can enroll their own devices in just moments over Wi-Fi.
- Controls, policies, VPN, wireless network, and Exchange ActiveSync settings will be automatically configured for users.
- Supports the complete device lifecycle. Automated process for device role changes and decommissioning

Blackberry Workspaces: Secure Multi-OS File Sharing

The leading secure enterprise file sync and share (EFSS) solution, Workspaces embeds Digital Rights Management (DRM) protection into files, so content remains secure and within your control, even after it's downloaded and shared.
