

THIRD-PARTY RISK ASSESSMENT

EXTEND
RESOURCES

Explore vendor security posture and identify potential risks to your organization.

Today, companies rely on vendors and a variety of third-party organizations to operate. From cloud software and IT services companies to an outside bookkeeper or law firm, vendors often have access to your systems where sensitive data is stored.

Without proper management, these third parties—and the fourth parties they depend on—can introduce dangerous information security risks into your environment.

Assessing third-party risk helps you understand the security posture of your vendors, identify any potential risks, and work with those organizations to reduce those risks.

Risk assessments from EXTEND Resources give you the insights you need to address outside threats and enhance your overall security practices.

4 SIGNS IT IS TIME TO ASSESS THIRD-PARTY SECURITY RISKS.

1

It has been more than one year since you last assessed vendor risk.

2

You have not assigned business impact categories to your third parties.

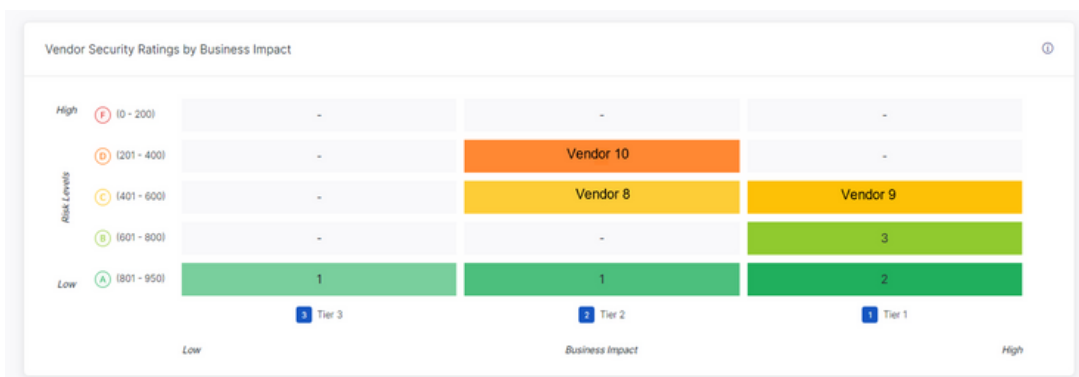

3

You don't know if your third parties have experienced a recent data breach.

4

You don't know if vendors meet the cybersecurity requirements in your contract.

COMPARE VENDORS BY BUSINESS IMPACT AND RISK LEVELS

VALUABLE RISK INSIGHTS ACROSS SIX KEY THREAT AREAS

In addition to insights into a vendor's overall security score, EXTEND provides security risk ratings, rating trends, and a breakdown of risk severity in five critical areas. Plus, discover vendors' geolocation to investigate other risks.

- Overall Cyber Risk
- Website Security
- Network Security
- Brand & Reputation Risk
- Email Security
- Phishing & Malware

VISIBILITY INTO VENDOR VULNERABILITIES AND DATA LEAKS

This table lists vulnerabilities identified from information exposed in HTTP headers, website content, and open ports. It includes columns for CVE ID, CVE ID, Verified Status, Vulnerable Software, First Detected, and Exposure & PIs.

CVE ID	CVE ID	Verified Status	Vulnerable Software	First Detected	Exposure & PIs
8.8	CVE-2017-20055	Unverified	WordPress	Feb 14, 2023	1 domain/IP
8.8	CVE-2019-0746	Unverified	WordPress	Feb 14, 2023	1 domain/IP
7.8	CVE-2022-41041	Unverified	WordPress	Oct 25, 2022	9 domains & IPs
7.8	CVE-2020-16778	Unverified	WordPress	Feb 17, 2023	3 domains & IPs

This table lists data leaks detected by the engine. It includes columns for Exposed Date, Sec, Vendor, Significance, and Status.

Exposed Date	Sec	Vendor	Significance	Status
13 Jan, 2023	High	Amazon	AWS support engineer exposing credentials and personal identity documents	Closed
09 Dec, 2019	High	Cloudflare	Credentials for WordPress build systems, build artifacts	Closed
